Compilation lacking a collective title

AACR2: enter under heading for first work in the compilation [made-up example]

100 1# \$a Andersen, H. C. \$q (Hans Christian), \$d 1805-1875.
240 10 \$a Tommelise
245 10 \$a Tommelise / \$c af H.C. Andersen. Tomten / Astrid Lindgren.
700 12 \$a Lindgren, Astrid, \$d 1907-2002. \$t Tomten.

#1. Shows AACR2 structure; note that LC practice (LCRI 25,1, LCRI 25.7) would not require a uniform title (240) in this instance.

RDA: separate access points for each work; alternative to construct a preferred access point for the compilation using a devised title

[First work is known in English as Thumbelina; second is Tomte, the Swedish name for a small elf.]

245 00 \$a Tommelise / \$c af H.C. Andersen. Tomten / Astrid Lindgren.
700 12 \$a Andersen, H.C. \$q (Hans Christian), \$d 1805-1875. \$t Tommelise.

#1: For the 100 \$a, RDA 8.5.6 says to leave a space between letters. In the 245 \$c, RDA 1.7.6 says to omit any internal spaces if initials have full stops between them on the resource. (One of the JSC potential tasks after the first release of RDA is to consider standardizing the convention for spacing with initials and acronyms.)

#2: In 100 \$d, “b.” and “d.” dates are not covered by appendix E because they are not punctuation issues. So, the abbreviation “b.” (not included in RDA appendix B) is spelled out in this example. (An LC/PCC decision on this display of the birth date has not yet been made; one possibility would be to use the date + hyphen.)

#3: The term “plates” (in LC’s pre-AACR2 record) isn’t correct because what are labeled as “plates” in the book are on pages, not on leaves. Both AACR2 and RDA glossaries say plates are on leaves.

#4: The full stop used after symbol “cm” is the ISBD full stop preceding the next area.

#5: Because there is a statement that the mono series is published 4 times a year, the “November 22, 1925” date may be a chronological designation; it is given with the numeric designation on the resource. (Most dates given with series numbering are printing dates.)

#1. Note that many differences between the RDA and AACR2 records may be due to changes in integrating resource over time.

#2. Optional elements for file type, encoding format, file size are omitted due to frequent changes in integrating resource over time (would be impossible to maintain).

#3. Although word “created” is used in the statement of responsibility, the role played does not meet the RDA definition of “creator.”

#4. The words “and 16 other organizations” appeared on the resource (not a cataloger decision allowed by RDA to summarize a long statement of responsibility as was shown in an earlier example).

#1. Square brackets are used in 245 \$c to indicate that the enclosed information is supplied by the cataloger. RDA indicates that a cataloging agency should indicate that the information is supplied but doesn't specify how (RDA 2.2.4).

#2. "p. of music" is not in RDA.

#3. Content type (field 336) may be repeated to give as many terms as are appropriate; the same is true for Media type (field 337) and Carrier type (field 338). These three elements replace the GMD; Content type and Carrier type are core elements.

Media type (manifestation): RDA 3.2

Carrier type (manifestation): RDA 3.3

Content type (expression): RDA 6.10

#4. The MARC 500 field used for the relationship to the original represents LC practice (LC does not use field 534).

#5. MARBI has not addressed the content of subfield \$2 for relationship designator terms from RDA optional appendices I-K. RDA appendix I does not have a relationship designator for the contributor role of a writer of a foreword.
